<a href="#">2019-11-20 Julie Corlazzoli</a>	
1.3. Additions to Agenda Item No 10.4 " <b>Wrtitten Submission for Bylaw No. 1257, 2019</b> "	13 - 15
a. Add the following correspondence after page 401 of the Agenda package:	
<a href="#">2019 11 20 Carrie Marshall</a>	
<a href="#">2019-11-20 Julie Corlazzoli</a>	

Thank you for the opportunity to add my voice to the debate on marijuana accessibility in Ucluelet. I know that there is a normalization of marijuana and widespread acceptance of its use on the West Coast. However, there are significant health implications of marijuana use that are often overlooked or grossly undervalued by the public. These include:

- Physical and psychological dependence
- Impaired child and youth development
- Negative mental health outcomes
- Occupational safety risks and poor school outcomes
- Motor vehicle and other accidents
- Toxicity
- Unintended exposure to children and pets

There are a number of populations in which Health Canada recommends *against* THC-based marijuana use because they are at disproportionate risk of suffering these harmful effects. These include:

- Those under 25 years of age
- Those with underlying psychiatric disorders including psychosis, schizophrenia, anxiety, depression and other mood disorders, or a family history of schizophrenia
- Those with a history of substance use disorders, including alcohol
- Those using other psychoactive medications such as Zopiclone, Ativan, or muscle relaxants and
- Women of childbearing age not on a reliable contraceptive, as well as those planning pregnancy, and those who are pregnant, or breastfeeding

Taken together, those at risk for the harmful effects of marijuana constitute a significant portion of the Ucluelet population. I do understand that many of my patients and community members derive benefit from marijuana containing products, and I do not want to negatively impact local access to treatments they find medically useful. However, public health research on substance use consistently shows that increasing accessibility increases problematic use and that problematic use disproportionately affects our most vulnerable members. Please consider this in the context of the fact that VIHA does not have a single Substance Use counsellor on the West Coast.

I am asking Ucluelet Council to put public health and safety considerations at the forefront and adopt a public health approach to mitigate these harms. I would like to see the Council take a stand against increasing accessibility in our community, either through denying dispensaries or at the very least imposing very strict restrictions that reduce the likelihood of problematic use and require public protection to reduce the harms associated with risk. This might include very restricted operation hours, controlled monopoly, locations that limit youth accessibility, and mandatory contribution of profits to programmatic support for addiction treatment, mental health support and education programs and/or law enforcement.

Sincerely,

Dr. Carrie Marshall

Subject: Cannibus stores in Ukee

Hello,

I do not know any of the people that have put in applications and really I don't have much of an issue EXcept location of one. Like what I have heard from a few the one application for the back lot of the Ucluelet liquor store is the one I don't agree with location. This location backs onto Larch which is mainly a residential street. This street has many young people that walk this street to and from school already. There are homes directly across the street and this will increase traffic on Larch. This road is busy enough already! ... Also there is a house nearby that is to support women that have recently been released from treatment. While yes I know there is a liquor store right there why push the demons harder and add a pot shop too.

This is just my opinion I hope this helps.

Bernadette Herbert

Thank you for the opportunity to add my voice to the debate on marijuana accessibility in Ucluelet. I know that there is a normalization of marijuana and widespread acceptance of its use on the West Coast.
